TECHNICAL SKILLS

Programming Languages	Python, C, JavaScript
Web Development	HTML, CSS, React, React Native, Flask
ML & Data Analysis	NumPy, Pandas, Seaborn, Scikit-learn, Matplotlib
Database Management	MySQL, PostgreSQL
Hardware	Embedded C, Arduino Microcontrollers
Tools & DevOps	Git, GitHub, VS Code, Jupyter Notebook, Supabase

OBJECTIVE

Full-stack developer and machine learning enthusiast with proven experience building production-ready web applications, data-driven diagnostic tools, and decentralized systems. Skilled at translating complex, real-world problems into clean and efficient software. Eager to bring strong technical foundations in Python, React, and ML to a fast-paced engineering team and deliver meaningful impact from day one.

EDUCATION

Smt. Indira Gandhi College of Engineering, Mumbai

Aug 2022 – Jun 2026

Bachelor of Science in Computer Engineering

Expected Graduation: June 2026

Relevant Coursework: Computer Architecture, Data Structures & Algorithms, Embedded Systems, Operating Systems, Machine Learning, Database Management Systems, Computer Networks, Software Engineering

PROJECTS

VeriTrust – Decentralized Reputation DApp

2026

- Engineered an AI-powered decentralized reputation system for the gig economy, enabling tamper-proof, trustless worker ratings via blockchain smart contracts.
- Integrated an ML-based scoring engine that weighs multiple signals (job completion rate, client feedback, response time) to generate fair, bias-resistant reputation scores.
- Tech Stack: Solidity, Web3.js, Python, React, Express*

DailyDex – Gamified Habit Tracker App

2026

- Designed and developed a Pokemon-themed habit and routine management mobile app featuring streak tracking, XP rewards, and daily task categorisation.
- Applied gamification principles (reward loops, visual progress bars, level-up mechanics) to drive consistent user engagement and long-term habit retention.
- Tech Stack: React Native, PostgreSQL*

Thyroid Disease Detection System

2024

- Built a clinical diagnostic tool for early detection and multi-class staging of thyroid disorders using supervised machine learning.
- Conducted feature engineering and benchmarked Logistic Regression, Random Forest, and SVM classifiers; achieved over 95% accuracy on the test set.
- Designed an intuitive web interface for medical professionals to input patient data and receive real-time predictions with confidence scores.
- Tech Stack: Python, Scikit-learn, Pandas, Seaborn, Flask*

ACTIVITIES & INVOLVEMENT

- FOSS Club, SIGCE:** Contributed to open source projects, attended Linux and developer tooling workshops, and collaborated with peers on community coding initiatives to build practical software skills beyond the classroom.
- The Engineers Club, SIGCE:** Helped organise college-level hackathons, technical seminars, and industry speaker sessions. Actively involved in bridging the gap between academic theory and real-world engineering practice.
